

**Competency Based  
Assessment  
Classes III and VI**

**Report 2017**

## ACKNOWLEDGEMENT

Bhutan Council for School Examinations and Assessment would like to extend its gratitude to all the DEOs, TEOs, Principals, Teachers, and Students, who participated and supported in carrying out the study. Assessment and Monitoring Division (AMD), BCSEA also acknowledge, in particular, the contributions made by the following officials:

### EDITORIAL ADVISOR

**Mr. Tenzin Dorji,**

Secretary, Bhutan Council for School Examinations and Assessment, Thimphu.

### DATA ANALYSIS

1. Mr. Karma Jigme Lepcha, Subject Coordinator, BCSEA
2. Mr. Arjun Kumar Gurung, Principal EMO, BCSEA
3. Mr. Sonam Gyelshen, ICT Officer BCSEA
4. Mr. Kinley, Subject Coordinator

### REPORT WRITING

1. Ms. Kinley Dema, EMO, BCSEA
2. Ms. Sonam Lhamo, EMO, BCSEA
3. Mr. Mani Dorji, EMO, BCSEA
4. Mr. Arjun Kumar Gurung, Principal EMO, BCSEA
5. Ms. Sharda Rai, Subject Coordinator, BCSEA
6. Ms. Renuka Chettri, Subject Coordinator, BCSEA
7. Ms. Sapna Subba, Subject Coordinator, BCSEA
8. Ms. Kuenga Wangmo, Subject Coordinator, BCSEA
9. Mr. Pema Wangdi, Subject Coordinator, BCSEA
10. Mr. Loden Chozin, Subject Coordinator, BCSEA

### COPY EDITING AND PROOF READING

1. Ms. Kinley Dema, EMO, BCSEA
2. Ms. Sonam Lhamo, EMO, BCSEA
3. Mr. Mani Dorji, EMO, BCSEA
4. Mr. Arjun Kumar Gurung, Principal EMO, BCSEA

### DESIGN AND LAYOUT

Mr. Karma Jigme Lepcha, Subject Coordinator, BCSEA

### OVERALL COORDINATOR

Mr. Sangay Tenzin, Chief, Assessment and Monitoring Division, BCSEA

## **FOREWORD**

This study on the Competency Based Assessment Report, Classes III and VI – 2017, provides the schools and the other stakeholders with feedback on the performance of students in all subjects across the country to make informed decisions on the education policy and the assessment framework. It also provides indications about the existence of performance gap in subjects, gender, school level, school type and Dzongkhag.

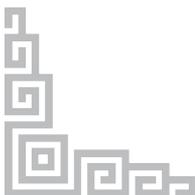

BCSEA wishes to compare the standard of lower and upper primary exit levels, conducting research into policies and programmes to improve the quality of student learning and teaching and providing insight and support to study existing school-based assessment practices and strengthen the same.

I would like to extend my thanks and appreciation to all my colleagues for their team work and enduring efforts in producing this technical report in timely manner. This crucial work on the Competency Based Assessment would inform the nation on the current status of our students' performance in all the subjects as they exit from the lower and upper primary exit levels.

Any feedback from the schools on this report will be highly appreciated.

### **Sangay Tenzin**

Chief Programme Officer,  
Assessment and Monitoring Division,  
Bhutan Council for School Examinations and Assessment

## EXECUTIVE SUMMARY

Since 1999, Class VI board examination was conducted at the school level with questions, model answers and marking schemes being set by the then Bhutan Board of Examinations (BBE). Schools conduct the examination and send the consolidated results to the BBE for analysis and feedback. After Bhutan Council for School Examinations and Assessment (BCSEA) had learned that the year-end examination was being presumed as board examination and as it posed undue pressure on students and teachers, the examination was decentralized to the schools.

Class III Competency Based Assessment (CBA) was introduced in 2011 as a part of the McKinsey project on Accelerating Bhutan's Socio Economic Development (ABSD). Under this initiative, the project was aimed at improving the assessment system in schools.

The purpose of this assessment for Class III was to assess the core competencies in three main subjects; English, Mathematics and Dzongkha and also to have uniform assessment across the schools. The assessment is conducted out of 50 marks in all subjects for Class III and 100 marks for Class VI.

In 2016, BCSEA carried out an analysis on the results of Classes III and VI year-end assessment. A total of 10,966 students' year-end assessment raw marks (out of 50 marks) were collected out of 12,525 Class III registered students. Similarly, 13,257 students' year-end assessment raw marks (out of 100 marks) were collected from 14,530 Class VI registered students.

Further, for the purpose of item analysis across all subjects at Classes III and VI (excluding Class III Dzongkha EVS), sample answer scripts were collected from all the schools.

The main purposes of this study were to:

1. enable BCSEA to compare the student learning standard based on mean scores in each subject at lower & upper primary exit level;
2. provide an authentic feedback to schools on their students' achievements;
3. assess students' performance in competency based items;
4. provide stakeholders with information on student's learning outcomes; and
5. provide information to policy makers to make informed decisions about resource allocation and to monitor the learning standard.

The major policy related questions for this study for both Classes III and VI were as follows:

1. What is the overall performance of students studying in both Classes III & VI?
2. What is the level of students' performance in each subject?
3. What are the relations between the level of performance against the various background variables, such as school type, level, location, gender etc.?

## SIGNIFICANCE OF THE STUDY

There are four primary stakeholders that may benefit from this study:

1. BCSEA, would be able to ascertain the overall performance of the schools and the students in each subject to make informed decisions on the assessment framework and the quality of the Classes III and VI CBAT items.
2. The schools would have access to relevant data on their student performance which would provide them opportunity to strategize methodologies in improving the student learning outcomes.
3. It would enable the Ministry of Education (MoE) to amend policies on the existing year-end assessment system.
4. Royal Education Council (REC) would have a firm basis to revise assessment policies and curriculum for the students at primary exit levels.

## DEMOGRAPHIC INFORMATION ON CLASS VI

1. There were 13,257 students studying in Class VI in 418 schools across the country.
2. A total of 13,051 students were from government schools and 206 students from private schools.
3. Of the total population of 13,257 students studying in Class VI, 6,825 were female, and 6,432 were male.
4. The schools located in the urban area had the largest number of students (4,580) while schools located in semi-urban area had the least number of students (895).
5. Thimphu Thromde had the maximum representation (1,563 students) of the population consisting of 23 schools followed by Samtse Dzongkhag (1,265 students) with 29 schools. Gasa Dzongkhag had only 4 schools with least number of students (80 students).

## MAJOR FINDINGS ON CLASS VI (100 MARKS)

### Overall Performance

1. The overall mean score was 59.12 in Dzongkha, 47.72 in English, 41.27 in Mathematics, 54.01 in Science and 51.19 in Social studies.
2. Female students performed better than the male students in Dzongkha, English and Social Studies while male students performed better in Mathematics and Science.
3. Students studying in private schools have outperformed the students studying in government schools across all subjects.
4. Students of Lhuentse Dzongkhag outperformed students in other Dzongkhags in Dzongkha, English, Mathematics and Science with mean scores of 73.16, 56.57, 49.47 and 61.40 respectively. Gelephu Thromde outperformed in Social studies with a mean score of 67.28.
5. Students of Wangduephodrang Dzongkhag scored minimum in English and

- Science with a mean score of 42.58 and 46.91 respectively.
6. Students of Gasa Dzongkhag and Samdrup Jongkhar Thromde scored minimum mean score of 36.87 and 36.26 in Mathematics.
  7. Students of Samtse Dzongkhag achieved a minimum mean score of 45.63 in Dzongkha and 44.71 in Social Studies respectively.
  8. Autonomous Primary Schools outperformed all other nine levels.
  9. The performance of students from Difficult (D) location schools were least in all the subjects.

### STUDENT'S COMPETENCY IN THE PROFICIENCY SCALE

1. Over all test item reliability of Dzongkha, English, Mathematics, Science and Social Studies were 0.74, 0.69, 0.91, 0.96 and 0.96 respectively.
2. In Dzongkha, about 36.10% of the students achieved proficiency level 5, about 16.89% were at level 6, and about 15% of the students were at level 3 and below.
3. In English, about 44.7% of the students achieved proficiency level 4, about 3.6% were at level 6, and about 33.1% of the students were at level 3 and below.
4. In Mathematics, about 33.8 % of the students achieved proficiency level 4, about 3.2% were at level 6, and about 49% of the students were at level 3 and below.
5. In Science, about 41.8% of the students achieved proficiency level 4, about 13.5% were at level 6, and about 24.8% of the students were at level 3 and below.
6. In Social Studies, about 43.3% of the students achieved proficiency level 4, about 2.9 % were at level 6, and about 35.5% of the students were at level 3 and below.

### DEMOGRAPHIC INFORMATION ON CLASS III

1. A total of 10,966 students appeared for Class III Year-end assessment in 2016 from 531 schools in the country.
2. A total of 10,635 students appeared from government schools while 331 students appeared from private schools.
3. Of the 10,966 students who appeared for Class III year-end assessment, 5,491 were females, and 5,475 were males.
4. The schools located in the urban area had the largest number of students (3,578) followed by the schools located in rural area (2,589) while the schools located in semi-urban area had the least number of students (840).
5. The Thimphu Thromde had the maximum representation of the population with 1,409 students, followed by Samtse Dzongkhag with 1,092 students and the least number of students from Gasa Dzongkhag with 58 students.

### MAJOR FINDINGS ON CLASS III (50 MARKS)

#### Overall Performance

1. Students performed well in Dzongkha followed by Mathematics. Dzongkha had

- the highest mean score of 34.22 followed by Mathematics with mean score of 29.74, and the least was in English with mean score of 26.99.
2. When compared to the male students, female students across the country performed slightly better in all the three subjects, with mean score for female students being 35.73 and male students 35.31.
  3. Students in urban schools performed better across the three subjects when compared to the students in other locations.
  4. Amongst the nine levels of schools across the country, students in Lower Secondary Schools performed better across all subjects (Mathematics - 30.80, English - 28.38 and Dzongkha - 34.99), while central schools did not perform so well.
  5. Students studying in ECR had the maximum mean (35.75) in Dzongkha followed by HSS with mean score 35.40. Primary schools had the least mean in Dzongkha (33.60).
  6. Students studying in private schools outperformed the students studying in Government schools.
  7. Students of Lhuntse outperformed students in other Dzongkhags in Dzongkha (39.58) and Mathematics (35.7), while students in Trashi Yangtse Dzongkhag performed better in English with a mean score of 33.02.
  8. Students of Gelephu Thromdey scored minimum in both Dzongkha (27.30) and Mathematics (23.88).
  9. Students of Samdrup Jongkhar Thromdey scored the minimum mean score of 18.09 in English.

## **MAJOR RECOMMENDATIONS**

1. Schools under various Dzongkhags to collaborate and learn from high performing schools.
2. Relevant stakeholders to place different interventions to increase the learning competencies in achieving higher proficiency level.
3. Schools to bridge the gender learning gap through different strategies in teaching learning process.
4. Schools to incorporate higher order thinking skill items in the school based assessment.
5. MoE to prioritize resource allocation as per the number of students in the schools.
6. Schools to emphasize more on Grammar and Writing strand in English and Dzongkha.
7. Teachers to provide students with adequate practice on Reading and Writing of unseen texts.
8. BCSEA and REC to review on the mode of assessment of Classes III and VI year-end assessment.
9. Schools to follow the instructions prescribed by the BCSEA throughout the process of test administration and evaluation of the answer scripts.

# CHAPTER 1    **CONTEXT OF THE STUDY**

## **1.1    Background**

---

BCSEA as the only examination and assessment body in the country had been conducting Class VI year-end examination known as 'Primary School Certificate Examination' (PSCE) since 1986. Class III Competency Based Assessment (CBA) was established in 2011 when the concept of assessing the core competencies across subjects was recommended by the McKinsey project. Initially, the core competencies assessed at Class III were in the three main subjects; English, Mathematics and Dzongkha. However in 2014, it was extended to assess even Dzongkha Environmental Studies (EVS) for Class III and all the subjects for Class VI after which the PCSE got renamed as Class VI CBA.

Without substantial data and proper analysis of the results of the students in lower primary and upper primary exit levels, it is rarely possible for the BCSEA to benchmark and improve the standard of assessment practices. Moreover, BCSEA has not been able to provide any feedback on the school's academic status to bring improvement in their student achievement. Therefore, it is timely for the conduct of a nation-wide study on the performance of the students in the CBA to understand the degree of feasibility of the current assessment practice so that BCSEA could review and refine its assessment practices accordingly.

This study reports the findings of the analysis of student performance of Classes III and VI Competency Based Assessment (CBA) studying across the country in 2016.

This document contains detailed result analysis along with the item analysis of all the subjects in Classes III and VI. It also provides a comparative analysis on the variations of the performance of students and schools based on the parameters such as location, type, level and gender. Further, it attempts to analyse performance on each item based on the cognitive levels. The demographic information of the students are used to interpret the findings that attribute to their academic performance. Emphasis is also placed on checking the standard of the students at lower primary and upper primary exit levels. In addition, it also attempts to establish a bench mark for future comparisons and to take necessary steps in bringing about significant improvement in student achievement.

Further, this will also provide relevant data to schools to serve as a feedback on their student level of performance and to improve on the teaching learning processes.

## 1.2 Main Purpose of the Study

---

The main purposes of this study were to:

1. enable BCSEA to benchmark the student learning standard based on mean scores in each subject at lower & upper primary exit level;
2. provide an authentic feedback to schools on their students' achievements;
3. assess student's performance of competency based assessment;
4. provide the stakeholders with information on the student's learning outcomes; and
5. provide information to policy makers to make informed decisions about resource allocation and to monitor the learning standard.

The major policy related questions for this study for both Classes III and VI are as follows:

1. What is the overall performance of students studying in Classes III & VI?
2. What is the level of performance in each subject?
3. What are the relations between the levels of performance in against the various background variables, such as school type, level, location, gender etc.?

## 1.3 Significance of the Study

---

There were four primary stake holders that may benefit from this study:

1. BCSEA, would be able to ascertain the overall performance of the schools and the students in each subject to make informed decisions on the assessment framework and the quality of the Classes III and VI CBAT items.
2. The schools would have access to relevant data on their performance of students which would provide them opportunity to strategize methodologies in improving students' learning outcomes.
3. It would enable the Ministry of Education (MoE) to amend policies on the existing year-end assessment system.
4. Royal Education Council (REC) would have a firm basis to revise assessment policies and curriculum for the students at primary exit levels.

## 1.4 Demographic Information - Class VI

---

### 1.4.1 Overview

The demographic information in this section is gathered from the census survey of the entire population under study covering a total of 13,262 Class VI students studying in 418 schools across the country. Irrespective of government or private, the schools consisted of various levels offering Class VI curriculum placed under both Thromde and Dzongkhag.

#### 1.4.1.1 Number of students based on Dzongkhags

Thimphu Thromde had the maximum representation (1,563 students) of the

population consisting of 23 schools followed by Samtse Dzongkhag (1,265 students) consisting of 29 schools. On the other hand, Gasa Dzongkhag with only 4 schools had the least number of students (80 students) taking part in the study.

**Table 1.1: Number of students based on Dzongkhag/Thromde**

Dzongkhag	F	M	Total
Bumthang	159	161	320
Chukha	480	453	933
Dagana	279	249	528
Gasa	45	35	80
Gelephu Thromde	106	99	205
Haa	188	176	364
Lhuentse	175	120	295
Mongar	424	348	772
Paro	427	388	815
Pemagatshel	244	226	470
Phuentsholing Thromde	206	199	405
Punakha	251	186	437
Samdrup Jongkhar	321	273	594
Samdrup Jongkhar Thromde	103	106	209
Samtse	620	645	1265
Sarpang	372	384	756
Thim Thromde	749	814	1563
Thimphu	153	139	292
Trashiyangtse	225	204	429
Trashigang	458	433	891
Trongsa	148	153	301
Tsirang	195	232	427
Wangdue Phodrang	315	261	576
Zhemgang	182	148	330
<b>Total</b>	<b>6825</b>	<b>6432</b>	<b>13257</b>

#### 1.4.1.2 Number of students based on the Level of Schools

Among the various levels of schools, Primary School (PS) had the largest student population of 4,838 followed by Lower Secondary School with 3,475 students while the least number of students was from Autonomous Higher Secondary School (AHSS) with just 97 students.

**Table 1.2: Total number of students based on Level of the School**

Level	F	M	Total
Autonomous Higher Secondary School (AHSS)	57	40	97
Autonomous Middle Secondary School (AMSS)	141	150	291
Autonomous Lower Secondary School (ALSS)	102	92	194
Autonomous Primary School (APS)	34	113	147
Central School (CS)	1060	988	2048
Higher Secondary School (HSS)	169	160	329

Level	F	M	Total
Middle Secondary School (MSS)	984	854	1838
Lower Secondary School (LSS)	1744	1731	3475
Primary School (PS)	2534	2304	4838
<b>Total</b>	<b>6825</b>	<b>6432</b>	<b>13257</b>

### 1.4.1.3 Number of students based on the types of schools

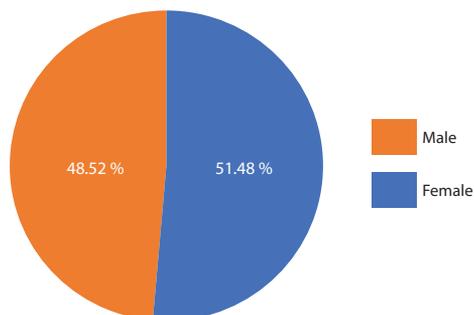

A total of 13,056 students were from government school where as only 206 students were from private school that participated in the study.

Table 1.3: Total number of students based on type of school

School Type	F	M	Total
Govt.	6699	6352	13051
Pvt.	126	80	206
<b>Total</b>	<b>6825</b>	<b>6432</b>	<b>13257</b>

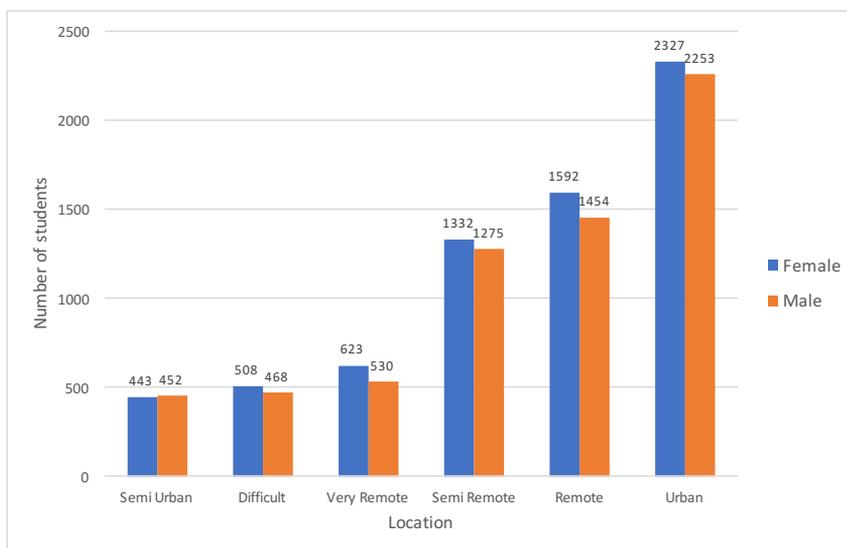

### 1.4.1.4 Number of students based on Gender

Of the total population of 13257 students, 6,825 were female and 6,432 were male studying at Class VI in 2016.

### 1.4.1.5 Number of students based on Location

Among the schools placed under various locations, the schools located in urban area had the largest number of students (4,580) but on the contrary schools located in semi-urban area had the smallest number of students (895) taking part in the study.

## 1.5 Demographic Information - Class III

### 1.5.1 Overview

A total of 10,966 students appeared for Class III Year-end Competency Based Assessment in 2016. A total of 10,635 students appeared from government schools while 331 students appeared from private schools. Of the 10,966 students who appeared for Class III year-end CBA, 5491 were females, and 5475 were males. The schools located in the urban area had the largest number of students (3,578) followed by the schools located in rural area (2,589) while the schools located in semi-urban area had the least number of students (840). The Thimphu Thromde had the maximum representation of the population with 1,409 students, followed by Samtse Dzongkhag with 1,092 students and the least number of students from Gasa Dzongkhag with 58 students.

#### 1.5.1.1 School Level

Of the various levels of schools, Primary School (PS) had the largest student population of 4,865 followed by Lower Secondary School with 2764 students while the least number of students was from Extended Classroom (ECR) with just 210 students.

**Table 1.6. Number of students based on Level of Schools**

School Level	F	M	Total
Central School	611	632	1243
Extended Class Room	119	91	210
Higher Secondary School	160	170	330
Lower Secondary School	1405	1359	2764
Middle Secondary School	801	753	1554
Primary School	2395	2470	4865
<b>Total</b>	<b>5491</b>	<b>5475</b>	<b>10966</b>

### 1.5.1.2 Number of students based on Type of Schools

A total of 10635 students were from government school where as only 331 students were from private school.

**Table 1.7: Number of students based on Type of Schools**

School Type	F	M	Total
GOVT	5323	5312	10635
PVT	168	163	331
<b>Total</b>	<b>5491</b>	<b>5475</b>	<b>10966</b>

### 1.5.1.3 Number of the students based on Gender

Of the total population of 10966 students, 5491 were female and 5475 were male studying at Class III in 2016.

**Table 1.8: No of students based on Gender**

Gender	Frequency
Female	5491
Male	5475
<b>Total</b>	<b>10966</b>

### 1.5.1.4 Number of students based on Location

Among the schools placed under various locations, the schools located in urban area had the largest number of students (3,578) and the schools located in Semi-Urban had the least number of students (840) who took part in the assessment.

**Table 1.9: Number of students based on Location**

Location	F	M	Total
D	439	422	861
R	1306	1283	2589
SR	938	1009	1947
SU	430	410	840
U	1787	1791	3578
VR	591	560	1151
<b>Total</b>	<b>5491</b>	<b>5475</b>	<b>10966</b>

### 1.5.1.5 Number of students based on Dzongkhag

Thimphu Thromde had the maximum representation (1,409 students) of the population consisting of 26 schools followed by Samtse Dzongkhag (1,092 students) consisting of 44 schools. On the other hand, Gasa Dzongkhag with only 5 schools had the least number of students (58 students) who part in the assessment.

Table 1.10: Number of students based on Dzongkhag

Dzongkhag	F	M	Total
Bumthang	66	94	160
Chukha	422	353	775
Dagana	205	230	435
Gasa	24	34	58

## 1.6 Methodology

This chapter describes the methodology followed in the conduct of the year-end assessment for Classes III and VI across the subjects. It describes all the events in sequence; instrument development and moderation, data collection, data entry, data cleaning and analysis and report writing.

### 1.6.1 Test Instrument Development

The respective subject teachers were invited to develop the test items based on the assessment framework, the model answers, and marking scheme across the subjects and the BCSEA subject EMOs did the final review, proof reading and compilation. The test instruments were based on the learning outcomes and mode of assessment as outlined in the REC curriculum framework. The blueprint across the subjects was also developed followed by test specification on Bloom's taxonomy.

The moderation of test instruments was held at Taba PS, Thimphu, from 1st – 7th August, 2016.

## 1.6.2 Instrumentation

### 1.6.2.1 Classes III and VI Dzongkha/English

The CBA Dzongkha and English for both Classes III and VI had three strands: a) Reading, b) Writing and c) Language. The duration of the test was 1 hour 15 minutes for Class III and 2 hours 15 minutes for Class VI. The topics/areas and weightage for the assessment were based on the prescribed syllabus. Both Classes III and VI assessment question papers consisted of 50% conventional items and 50% competency based items. Speaking and listening were excluded in Dzongkha and English.

### 1.6.2.2 Classes III and VI Mathematics

The CBA Mathematics for Classes III and VI were developed from six major strands; Numbers, Operations, Patterns and Relationships, Measurement, Geometry and Data Management and Probability. These six categories characterise the range of mathematical content that is central to the discipline and illustrate the broad areas of content that guide development of test items for Classes III and VI year end assessment. The assessment question paper was set out of 50 marks with a writing time of 1 hour and 15 minutes for Class III and 100 marks with a writing time of 2 hours and 15 minutes in Class VI. Both Classes III and VI assessment question papers consisted of 50% conventional items and 50% competency based items.

### 1.6.2.3 Class VI Science

CBA Class VI Science assessed and evaluated student's understanding of twelve chapters. The assessment question paper was set out of 100 marks with a test duration of 2 hours and 15 minutes. The assessment of each chapter was based on the weightage prescribed by the REC. The assessment question paper consisted of 50% conventional items and 50% competency based items that focused on covering knowledge, skills and values.

### 1.6.2.4 Class VI Social Studies

CBA Class VI Social Studies assessed and evaluated student's understanding of three units which consisted of eleven chapters. The test paper was set out of 100 marks with a test duration of 2 hours and 15 minutes. The assessment of each chapter was based on the weightage prescribed by the REC. The question paper consisted of 50% conventional items and 50% competency based items.

## 1.6.3 Data Format

To ascertain the standard of our students' performance at the lower and upper primary exit level, BCSEA decided to do data analysis of the Classes III and VI CBA purely based on the raw marks (the actual marks scored in the BCSEA papers). Prior to the 2016 CBAT, BCSEA communicated with schools across the country through their respective DEOs/TEOs regarding the standard data punching format for the raw marks and also about the sorting of student answer scripts based on top 3, middle 3 and bottom 3 from each school. They were also informed to reach the answer scripts to the DEOs/TEOs office by February 2017.

### **1.6.4 Test Administration and Evaluation**

CBA was administered in the schools across the country from 21st to 26th November, 2017 according to the BCSEA's timetable and the answer scripts were also evaluated in the respective schools based on the marking scheme and model answers provided by the BCSEA.

### **1.6.5 Data Collection**

The AMD officials collected the answer scripts and the consolidated raw marks from the DEOs/TEOs office (1st to 14th February, 2017). The documents were kept intact in the BCSEA office till the date and venue for the data analysis workshop was confirmed.

### **1.6.6 Data Entry**

Selected BCSEA officials were assigned to enter the data in the computers in Excel files using the standard format. They were given orientation on various data punching procedures.

### **1.6.7 Data Entry, Cleaning, Analysis and Report Writing**

The major task of data cleaning, analysis and report writing was carried out by the AMD officials in collaboration with the officials from ICT and SED in Khasadrapchu MSS from 30th April to 13th May, 2017. The data was analyzed using the software SPSS and Quest. The first draft of the report was produced on the last day of the workshop.

## CHAPTER 2 MAJOR FINDINGS

### 2.1 Class VI Student Performance based on:

#### 2.1.1 Subject

A total of 13257 students appeared the 2016 Class VI Year End Competency Based Assessment (CBA) out of which 6,825 were female, and 6,432 were male. All the question papers were out of 100 marks each. The highest score was in Dzongkha with 59.12 mean and the lowest was in Mathematics with 41.27 mean.

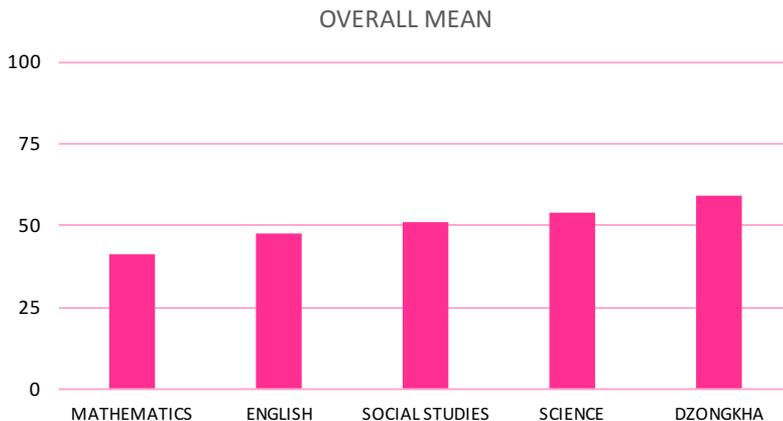

Figure 1.1: Overall performance across the subjects

#### 2.1.2 School Level

Among the school level type, maximum students (4,838) were from primary school and the least with 97 students were from Autonomous Higher Secondary School (AHSS).

- » The overall mean in Dzongkha was 59.12 with standard deviation of 17.27. The autonomous primary school (APS) scored the highest mean of 62.89 with standard deviation of 14.37. This was followed by primary school (60.83). The least mean 55.00 was scored by Higher Secondary school (HSS).
- » The overall mean in English was 47.72 with standard deviation of 14.62. The highest mean of 54.12 with 13.38 standard deviation was scored by autonomous primary school (APS). This was followed by autonomous higher secondary school with the mean score of 51.28. The least mean 44.89 was scored by Central School (CS).

- » The overall mean in Mathematics was 41.27 with standard deviation of 15.31. The autonomous primary school (APS) scored the highest mean of 55.75 with standard deviation of 11.72. This was followed by autonomous higher secondary school with the mean score of 48.32. The least mean 34.89 was scored by autonomous lower secondary school (ALSS).
- » The overall mean in Science was 54.01 with standard deviation of 18.26. The autonomous primary school (APS) scored the highest mean of 60.50 with standard deviation of 16.11. This was followed by Autonomous higher secondary school (AHSS) with the mean score of 59.77. The least mean 48.72 was scored by autonomous lower secondary school (ALSS).
- » The overall mean in Social Studies was 51.19 with standard deviation of 18.08. The autonomous higher secondary school (AHSS) scored the highest mean of 60.51 with standard deviation of 16.64. This was followed by Autonomous Primary School (APS) with mean score of 59.21. The least mean 46.71 was scored by Central School (CS).

### 2.1.3 School Type

Out of 13,257 students, 13,051 students were studying in the government schools while only 206 students were studying in the private schools. When comparing government schools with private schools, private schools have performed comparatively better than the government schools across all the subjects. The mean scores of the private schools were 68.34 in Dzongkha, 66.77 in English, 60.35 in Mathematics, 74.22 in Science and 71.85 in Social Studies while the government school's mean scores were 58.97, 47.42, 40.97, 53.69 and 50.86 respectively. Private schools have their highest mean score in Science (74.22) whereas the government schools have their highest mean score in Dzongkha (58.97). However, both the government (40.97) and private schools (60.35) have their lowest mean scores in Mathematics. Further, female students of the private schools have outperformed in all the five subjects.

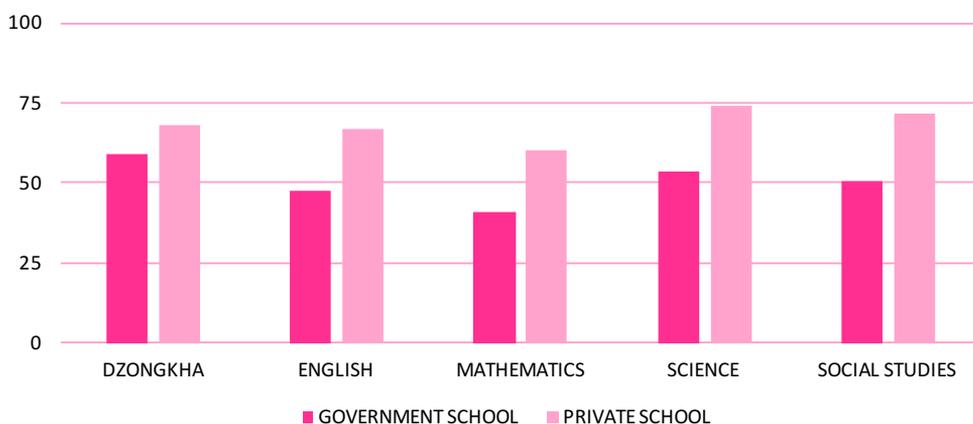

Figure 1.2: Performance by school type across the subjects

### 2.1.4 Location of School

- » In Dzongkha, students from very remote (VR) schools scored the highest mean of 64.89 followed by students from difficult (D) location schools (59.24). Rest of the four location of schools student performed almost at par.
- » In English, students from urban (U) schools scored the highest mean of 50.14 followed by the students from semi urban location (SU) (49.72). The least score was of students from difficult (D) location schools with mean score of 44.43.
- » In Mathematics, students from semi-urban (SU) location scored the highest mean of 43.20 followed by urban (U) (42.88). The least was of the students from difficult (D) region with mean score of 38.73.
- » In Science, urban (U) school students scored the highest mean of 56.12 followed by the students from semi urban (SU) (55.10). The least mean score of 49.57 was secured by students from difficult (D) location.
- » In Social Studies, urban (U) school students scored the highest mean of 54.21 followed by the very remote (VR) (51.79). The least mean score of 45.22 was secured by students from difficult (D) location.

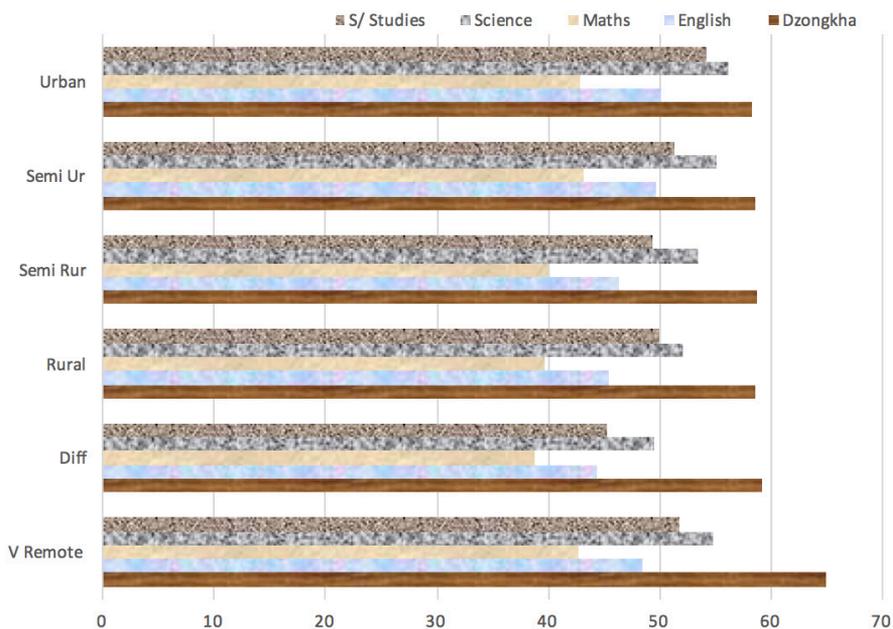

Figure 1.3: Performance by location across the subjects

### 2.1.5 Gender

Female students have performed better than the male students in Dzongkha (female mean 62.19 and male mean 55.87), English (female mean 49.25 and male mean 46.09) and Social Studies (female mean 51.74 and male mean 50.61). On the other hand, the male students have performed better in Mathematics (male

mean 41.29 and female mean 41.25) and Science (male mean 54.04 and female mean 53.98). However, for both the groups, the mean in Mathematics was the lowest while the mean in Dzongkha was the highest.

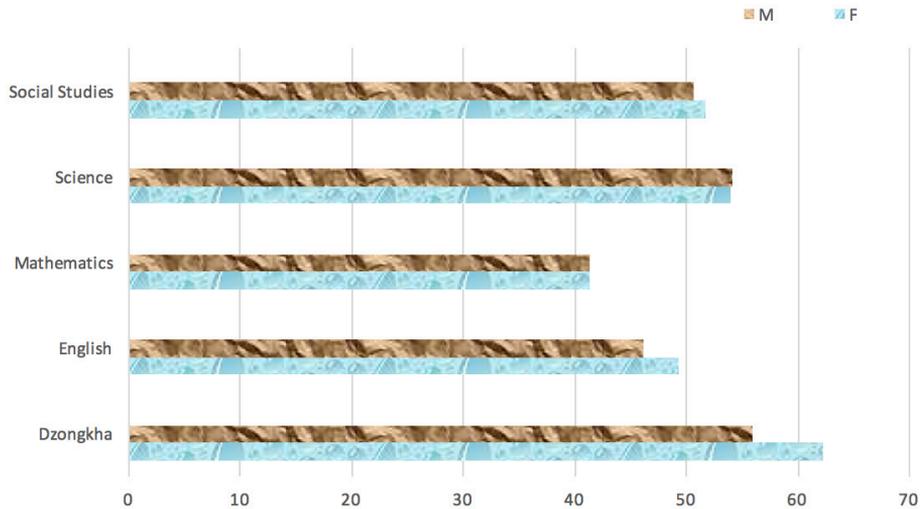

Figure 1.4: Performance by gender across the subjects

### 2.1.6 Dzongkhag

- » The highest mean in Dzongkha was 73.16 with a standard deviation of 13.88 was secured by the students of Lhuentse Dzongkhag (N=295). The least mean in Dzongkha was 45.63 with a standard deviation of 17.28 was secured by the students of Samtse Dzongkhag (N=1265).
- » The highest mean in English was 56.57 with a standard deviation of 17.54 was secured by the students of Lhuentse Dzongkhag (N=295). The least mean in English was 42.58 with a standard deviation of 13.12 is secured by the students of Wangduephodrang Dzongkhag (N=576).
- » The highest mean in Mathematics was 49.47 with a standard deviation of 17.05 was secured by the students of Lhuentse Dzongkhag (N=295). The least mean in Mathematics was 36.26 with a standard deviation of 13.72 was secured by the Samdrup Jongkhar Thromde (N=209).
- » The highest mean in Science was 61.40 with a standard deviation of 20.84 was secured by the students of Lhuentse Dzongkhag (N=295). The least mean in Science was 46.91 with a standard deviation of 18.35 was secured by the students of Wangdue Phodrang Dzongkhag (N=576).
- » The highest mean in Social studies was 67.28 with the standard deviation 14.48 was secured by the students of Gelephu Thromdey (N=205). The least mean in Social Studies was 44.71 with a standard deviation of 17.41 was secured by the students of Samtse Dzongkhag (N=1265).

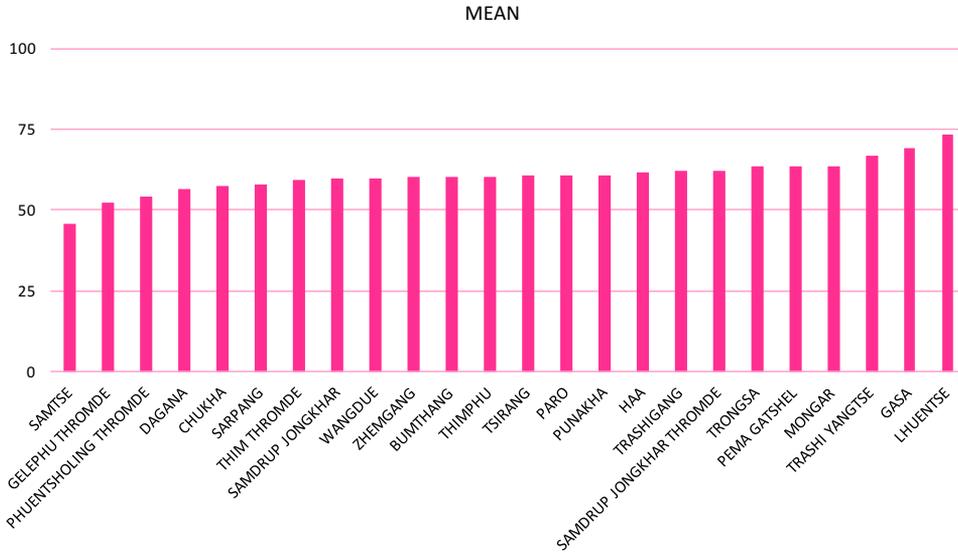

Figure 1.5: Performance in Dzongkha based on Dzongkhag/Thromdes (National Mean = 59.12)

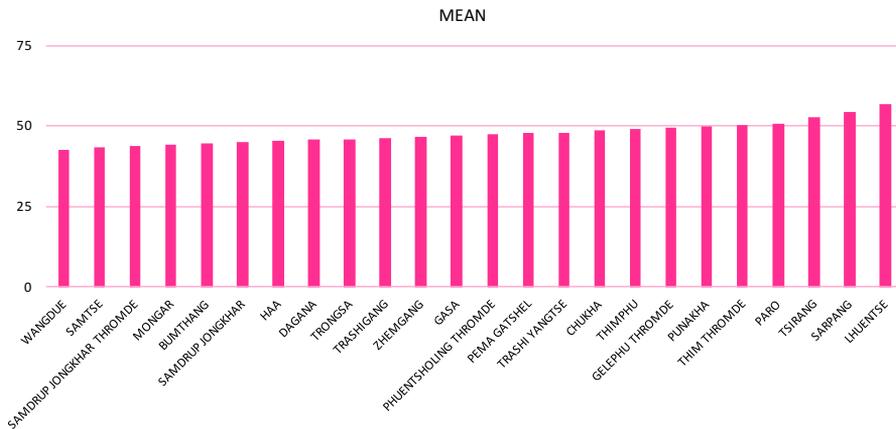

Figure 1.6: Performance in English based on Dzongkhag/Thromdes (National Mean = 47.72)

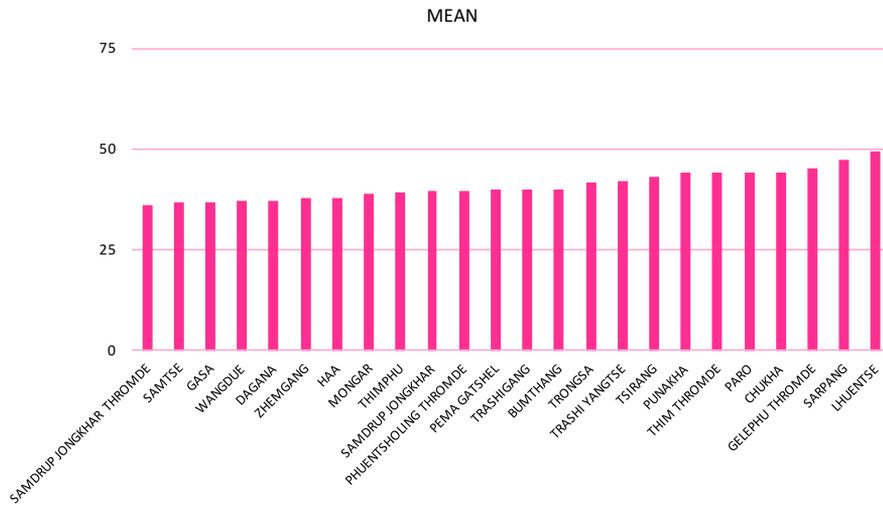

Figure 1.7: Performance in Maths based on Dzongkhags/Thromdes (National Mean = 41.27)

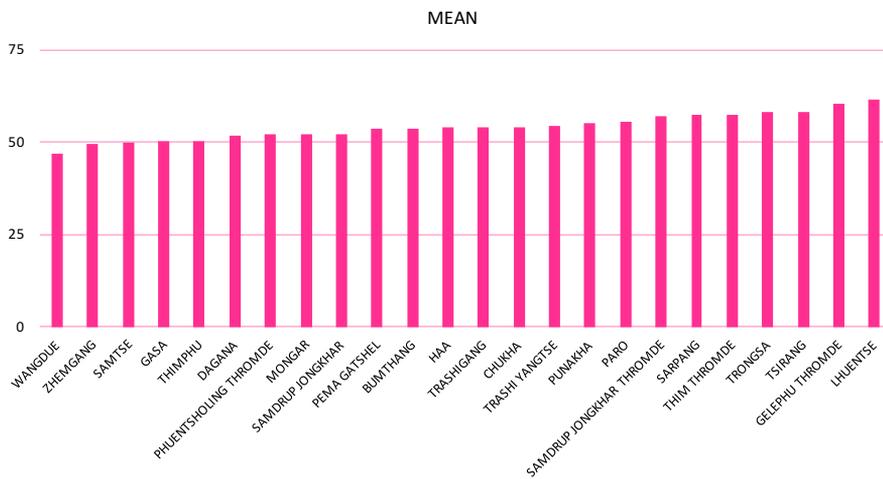

Figure 1.7: Performance in Science based on Dzongkhags/Thromdes (National Mean = 54.01)

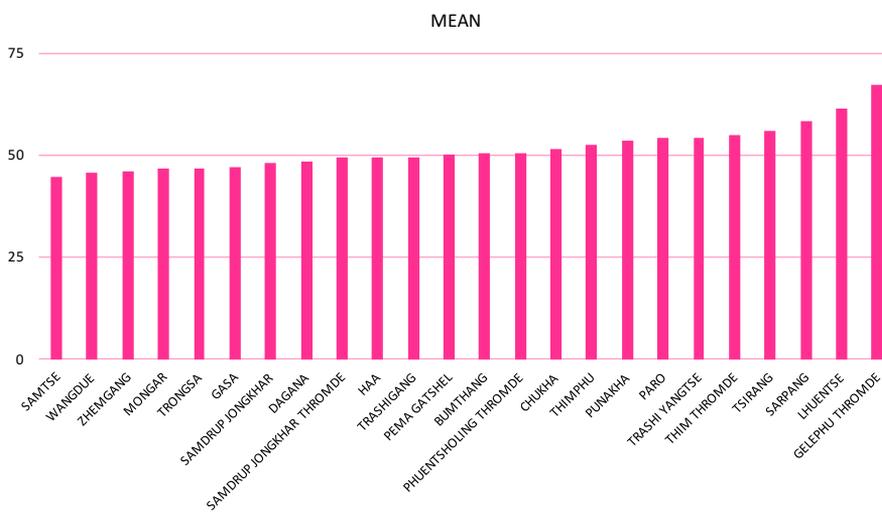

Figure 1.8: Performance in Social Studies based on Dzongkhags/Thromdes (National Mean = 51.19)

## 2.2 Class VI Student Performance - Item Analysis

### 2.2.1 Dzongkha

#### 2.2.1.1 Overall performance in three strands

Students outperformed in Reading strand with a mean score of 30.28 with 10.95 standard deviation followed by Writing strand and Language (18.79 mean score and 11.58) respectively.

#### 2.2.1.2 Gender performance

Female students outperformed the male students across all the three strands. From the three strands, female students achieved the best in Reading strand with 31.3 mean score followed by Writing strand with 19.75. Both genders performed better in Reading strand when compared to the other two strands. Both could not perform well in the Language strand.

#### 2.2.1.3 Cronbach alpha reliability

##### Item Analysis on Writing

There were two compulsory writing items (SEC-A-Q1 & SEC-A-Q2) of 20 and 10 marks each. The mean for SEC-A-Q1 item was 11.96 with 4.16 standard deviation and 6.53 mean with 1.99 standard deviate on for item SEC-A-Q2.

### **The Reliability of the items on writing**

The Cronbach's Alpha for the two items was 0.677 which on the Reliability scale is categorized as questionable.

### **Item Analysis on Grammar Accuracy**

14 items were administered to test the Grammar Accuracy: 10 MCQs and 4 SRQs. The mean for these 20 mark test items was 0.83 with 0.59 standard deviation.

### **Reliability of the Grammar Accuracy Items**

The Cronbach's Alpha for the 14 items was 0.79 which on the Reliability scale is categorized as acceptable.

### **Item Analysis on Reading Comprehension**

Reading Comprehension testing items are based on three genres: short story, essay and poetry. Students can choose to respond to one set of items from each genre. This section is out of 100 marks and only 50 marks questions are attempted.

Majority of the students tend to opt for Sec-C-I of the short story items; this shows that they prefer to attempt MCQ items and relatively shorter response items than ones which require them to write lengthy essays in Section-C-II. Students tend to choose Poetry Set-II than Poetry-Set-I.

#### **2.2.1.4 Overall proficiency level**

About 10.3% of the students achieved the Proficiency level 6 while majority of the students (21.9%) fell in the proficiency level 5. There were 21.7% (216) girls as compared to 11.6% (106) boys in the Proficiency Level 6. Likewise, about 67.2 % (606) girls compared to 68.6% (625) boys were in Level 4 to Level 5.

## **2.2.2 English**

A total of 1911 Class VI answer scripts were collected from the schools across the country for data analysis. There were 1051 female and 860 male and the overall mean score was 47.87 and 16.97 standard deviation with a maximum of 91.5 and minimum 7.5.

### **2.2.2.1 Overall performance in three strands**

The following report is on student's performance in three areas: Writing, Grammar Accuracy and Reading Comprehension.

In reading strand, overall the candidates secured a mean of 21.17 (out of 50 marks) with 9.15 standard deviation. This means that, students were able to secure about 42.34% of the scores set for this strand.

In writing which was out of 30 marks, the mean was 18.49 with 5.66 standard deviation. This means that, students were able to secure about 61.63% of the scores set for this strand.

In language which was out of 20 marks, the mean score was 8.22 with 4.17

standard deviation. This means that, students were able to secure about 41.1% of the scores set for this strand. The scoring pattern shows that students are not able to perform well in language and reading section.

### 2.2.2.2 Gender performance

The overall performance of girls is better than boys' in all the three strands. This pattern is seen to be occurring consistently at the following levels too, school type and location wise.

### 2.2.2.3 Dzongkhag/Thromde performance in three strands

**Reading Strand:** Thimphu Thromde out performed others with a mean of 24.70 and 9.51 standard deviation. Lhuntse followed closely with a mean of 24.20 with 9.03 standard deviation. The least performing Dzongkhag (Samtse) secured only 17.67 mean with 8.96 standard deviation.

**Writing Strand:** Gasa Dzongkhag secured the highest mean of 20.96 with 4.15 standard deviation followed by Thimphu Dzongkhag with a mean of 20.41 and 6.58 standard deviation. The least mean of 16.59 with 5.34 standard deviation was secured by Haa Dzongkhag.

**Language Strand:** Thimphu Thromde out performed others with a mean of 10.75 and 4.85 standard deviation followed closely by Lhuntse Dzongkhag with a mean of 10.27 and 4.14 standard deviation. Gasa Dzongkhag which scored the highest mean for writing strand scored the least mean of 6.25 with 4.60 standard deviation for language.

### 2.2.2.4 Cronbach alpha reliability

#### Item Analysis on Writing

There were two compulsory writing items (SEC-A-Q1 & SEC-A-Q2) of 20 and 10 marks each. The mean for SEC-A-Q1 item was 11.96 with 4.16 standard deviation and 6.53 mean with 1.99 standard deviation for item SEC-A-Q2.

#### The Reliability of the items on writing

The Cronbach's Alpha for the two items was 0.677 which on the Reliability scale is categorized as questionable.

#### Item Analysis on Grammar Accuracy

12 items were administered to test the Grammar Accuracy: 10 MCQs and 2 SRQs. The mean for these 20 mark test items was 8.22 with 4.17 standard deviation.

#### Reliability of the Grammar Accuracy Items

The Cronbach's Alpha for the two items was 0.71 which on the Reliability scale is categorized as acceptable.

#### Item Analysis on Reading Comprehension

Reading Comprehension testing items are based on three genres: short story, essay and poetry. Students can choose to respond to one set of items from

each genre. This section is out of 100 marks and only 50 marks questions are attempted.

Majority of the students tend to opt for Sec-C-I of the short story items; this shows that they prefer to attempt MCQ items and relatively shorter response items than ones which require them to write lengthy essays in Section-C-II. Students tend to choose Poetry Set-II than Poetry-Set-I.

#### **2.2.2.5 Overall proficiency level**

Majority of the candidates (44.7%) fell in the Proficiency Level 4 with the least number of candidates (3.5%) falling in the high Proficiency Level 6. There were 4% (41) girls as compared to 3% (27) boys in the Proficiency Level 6. Likewise, about 67% (702) girls compared to 50% (514) boys were in Level 4 to Level 5. Proportionately, in the lower levels of Proficiency 1 and 2, there were about 14% (146) girls as compared to 19% (164) boys.

### **2.2.3 Mathematics**

A total of 1960 mathematics answer-scripts were collected from all the Dzonkhags and Thromdes for item analysis out of which 976 were female and 904 were male. The mean score was 41.71 with the minimum score of 5 and maximum 97.

#### **2.2.3.1 Performance based on item types**

Amongst the three test items type, sample student outperformed in MCQ with score of 61.07% and standards deviation of 6.63 followed by mean score of 47.14% in SRQ. The minimum mean score was 32.28 % in the ERQ. Students have performed better in MCQ, followed by SRQ and ERQ.

#### **2.2.3.2 Performance based on content strand**

As per the sample student performance in each content strand; students have scored the highest mean percentage (53.14%) in Number Relation with a standard deviation of 2.96. The score in Fraction Decimal strand was the least with 37.61% mean percentage. About 68% of the candidates scored between the mark range of 1.75 and 8.79 out of 14 marks in this unit.

In all the seven content strand, boys have outperformed the girls, however, about 80 candidates didn't not declare their gender type. Both genders have performed low in Fraction-Decimal.

#### **2.2.3.3 Performance based on cognitive level**

The test items were developed based on the six cognitive levels of Blooms. The mean for remembering level items was highest at 71.15% with the standard deviation of 2.15 for the sample student. The lowest mean of 19.10 % was in creating level items with the standard deviation of 1.46.

The mean was higher for lower order thinking skills items and lower for higher order thinking skills items.

#### 2.2.3.4 Cronbach alpha reliability

As per the Cronbach's Alpha measure, the scale for the 40 items was 0.916 which indicated that the items was on the excellent scale of reliability for that sample cohort at Class VI.

#### 2.2.3.5 Difficulty index

Difficulty index measures the difficulty level of the items. Higher the difficulty index, easier will be the items and vice versa. Of the total 40 questions administered, sample student found (MCQ-QIII) very easy and two items (ERQ-15b, ERQ- 5b) very difficult. There were 22 moderate items and rest items fall under difficult items and easy items category.

#### 2.2.3.6 Discrimination index

Out of 40 items administered, 35 items fall in the discrimination index range of 0.30 to 0.64 which categorizes these items as very good. This means that these items were able to distinguish/discriminate between the high achieving students and the low achieving students.

The rest 5 items have the discrimination range between 0.20 - 0.29, which categories them to be revised because they do not differentiate between high achieving candidates and the low achieving candidates.

#### 2.2.3.7 Proficiency scale

While mean scores provide a comparison of student performance on a numerical level, proficiency levels provide a description of the knowledge and skills that students are typically capable of displaying. In Mathematics, majority of the student (33.8%) achieved Proficiency Level 4 with the least students (3.2 %) at level 6. About 49% of the students were at level 3 and below.

### 2.2.4 Science

#### 2.2.4.1 Performance based on item types

As per the mean percentage for each item type, data show that students have scored the highest mean percentage (65.92%) in MCQ items with a standard deviation of 4.83. Least percentage scored is in ERQ items which were out of 33 marks. Students have scored in better in SRQ, followed by MCQ and ERQ.

The performance by gender-wise mean shows that boys have outperformed girls in all the items types.

#### 2.2.4.2 Performance based on chapters

In the 12 chapters, candidates have scored the highest mean percentage in Classification of Animals with 70.68%. The lowest mean percentage is in Mass and Weight with 44.70%. Though the difference between the means obtained by both the girls and boys in the 12 chapters is not significant, boys have performed better in chapters such as Light and Sound, Electricity and Magnetism, Work and Energy and Poles and Equator of the Earth. However, girls have obtained better mean in chapters such as Green Plants and Diet &

Human System.

#### **2.2.4.3 Performance based on cognitive level**

The mean of 59.96 % is the highest for creating level with the standard deviation of 4.16. And the lowest mean of 16.17 is for understanding level for which standard deviation stands at 1.42.

The mean for remembering level items is highest at 62.95% with the standard deviation of 3.23. The lowest mean of 42.56 % is for creating level items with the standard deviation of 2.89.

The mean is higher for lower level items however the mean of 52.29% for creating item level is higher than analyzing and evaluating item types.

#### **2.2.4.4 Cronbach alpha reliability**

As per the Cronbach's Alpha measure, the scale for the 83 items is 0.95 and 0.96 which indicates the items to be on the excellent scale of reliability.

The overall mean of the sample population is 54.56 with 20.65 as the standard deviation. The mean obtained by girls was 54.09 with 20.79 standard deviation as compared to the mean secured by boys of 55.31 with 20.33 standard deviation.

#### **2.2.4.5 Difficulty index**

Difficulty index measures the difficulty level of the items. Higher the difficulty index, easier will be the items and vice versa. Three items were very easy, thirteen items were easy, five items were difficult and rest of the items were moderate. There were more moderate items.

#### **2.2.4.6 Discrimination index**

Out of 83 items, 73 items fall in the discrimination index range of 0.31 to 0.68 which categorizes these items as very good. This means that these items are able to distinguish/discriminate between the high achieving candidates and the low achieving candidates.

The rest 10 items have the range between 0.07 - 0.29 which categories them to be revised because they do not differentiate between high achieving candidates and the low achieving candidates.

#### **2.2.4.7 Overall proficiency level**

Majority of the candidates (41.8%) of the students fell in the Proficiency level 4 while a small cohort of candidates (13.5%) fell in the high Proficiency Level 6.

### **2.2.5 Social Studies**

#### **2.2.5.1 Performance based on item types**

The SRQ item type has the maximum mean 57.38% with the standard deviation of 8.62. The minimum mean is 43.98 % in the ERQ item type with the standard deviation being 9.34. Students have scored better in SRQ, followed by MCQ and ERQ.

### **2.2.5.2 Performance based on chapters**

In the 11 topic areas, candidates have scored the highest mean percentage in Living Together with 80.26%. The lowest mean percentage is in Understanding our Culture with 50.71%.

### **2.2.5.3 Performance based on cognitive level**

The mean for remembering level items is highest at 59.45% with the standard deviation of 3.36. The lowest mean of 43.57 % is for evaluating level items with the standard deviation of 3.04.

### **2.2.5.4 Cronbach alpha reliability**

As per the Cronbach's Alpha measure, the scale for the 79 items is 0.95 which indicates the items to be on the excellent scale of reliability. The overall mean of the sample population is 53.13 with 20.7 as the standard deviation.

### **2.2.5.5 Difficulty index**

Difficulty index measures the difficulty level of the items. Higher the difficulty index, easier will be the items and vice versa. Two items were very easy and five items were very difficult. There are more moderate items followed by easy items.

### **2.2.5.6 Discrimination index**

Out of 79 items, 71 items fall in the discrimination index range of 0.30 to 0.69 which categorizes these items as very good. This means that these items were able to distinguish/discriminate between the high achieving candidates and the low achieving candidates.

The rest 8 items have the range between 0.15 - 0.29 which categories them to be revised because they do not differentiate between high achieving candidates and the low achieving candidates.

### **2.2.5.7 Overall proficiency level**

Majority of the candidates (43.3%) of the students fell in the Proficiency level 4 while a very small cohort of candidates (2.9%) fell in the high Proficiency Level 6.

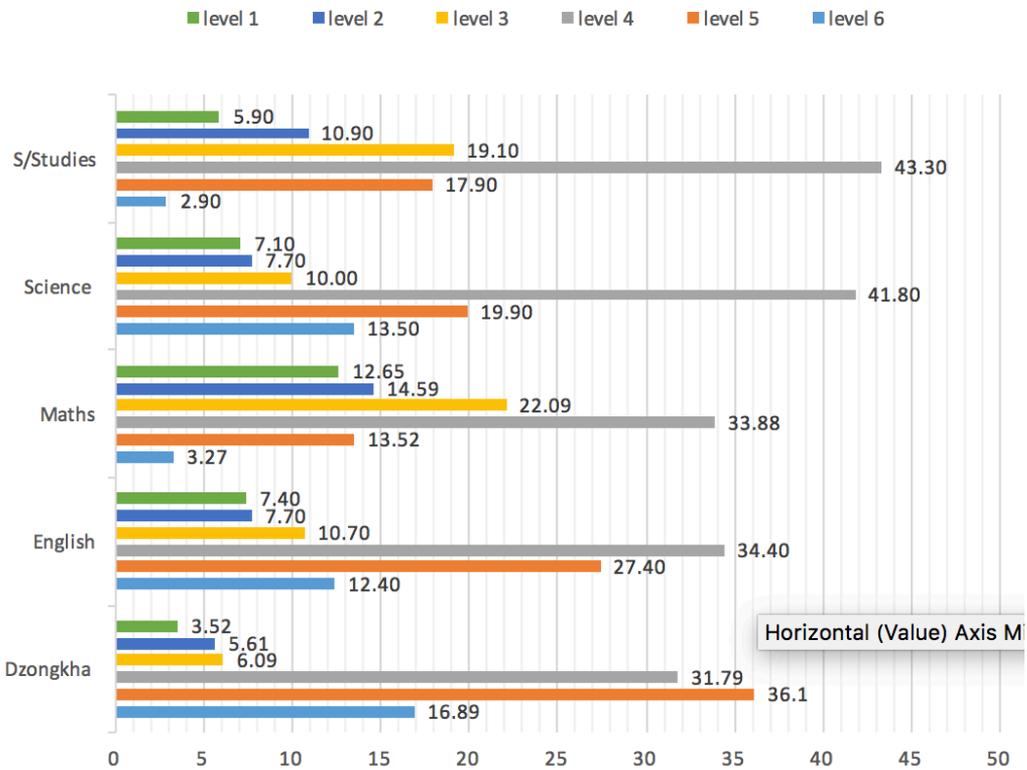

Figure 1.9: Proficiency scale across the different subjects in Class VI

## 2.3 Class III Student Performance based on Subjects

### 2.3.1 Subject

A total of 10,966 students appeared for Class III Year-end Competency Based Assessment in 2016. Students performed well in Dzongkha followed by Mathematics. Dzongkha has the highest mean score of 34.22 followed by Mathematics with mean score 29.74 and the least is in English with mean score 26.99.

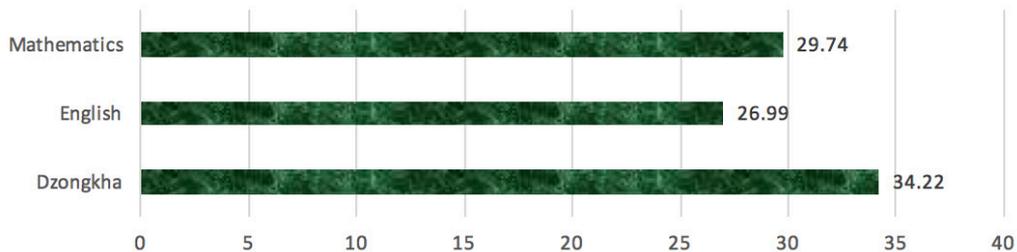

Figure 1.10: Mean score across all the subject (out of 50)

### 2.3.2 School Level

Amongst the 9 levels of schools across the country, students in Lower secondary schools performed better in all subjects (Dzongkha-34.99, English-28.38 and Mathematics-30.80) while Central schools did not perform so well. In Dzongkha, ECR have the maximum mean (35.75) followed by HSS with mean score 35.40. Primary schools have the least mean in Dzongkha (33.60).

Table 2.19: Performance in Dzongkha based on School level

School Level	N	Mean	SD
CS	1243	33.88	10.52
ECR	210	35.75	9.54
HSS	330	35.40	9.54
LSS	2764	34.99	10.55
MSS	1554	34.59	9.99
PS	4865	33.60	10.54
<b>Total</b>	<b>10966</b>	<b>34.22</b>	<b>10.43</b>

<b>Total</b>	<b>10966</b>	<b>26.99</b>	<b>10.42</b>

Table 2.21: Performance in Mathematics based on School level

School Level	N	Mean	SD
CS	1243	28.48	10.41
ECR	210	30.26	10.15
HSS	330	28.75	9.99
LSS	2764	30.80	9.52
MSS	1554	30.02	9.33
PS	4865	29.41	9.79
<b>Total</b>	<b>10966</b>	<b>29.74</b>	<b>9.77</b>

### 2.3.3 School Type

A total of 331 students studying in Private schools outperformed in all three subjects (Dzongkha-38.30, English-38.30 and Mathematics-37.30). A total of 10635 students studying in Government schools scored less in all three subjects.

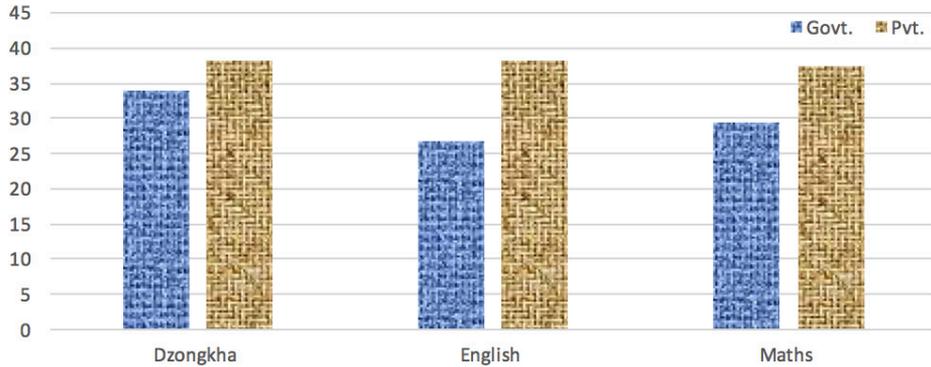

Figure 1.11: Performance by school type across the subject

### 2.3.4 Location of School

Students from very remote schools performed well in Mathematics with mean score of 30.92 followed by students from rural schools (30.74). Students studying in semi urban schools have the least mean score (25.92) in Mathematics. Meanwhile, students in urban schools performed better in both English and Dzongkha (28.46 and 34.95 mean score) when compared to the students in other location. Semi urban schools have the least mean (33.03) in these two subjects.

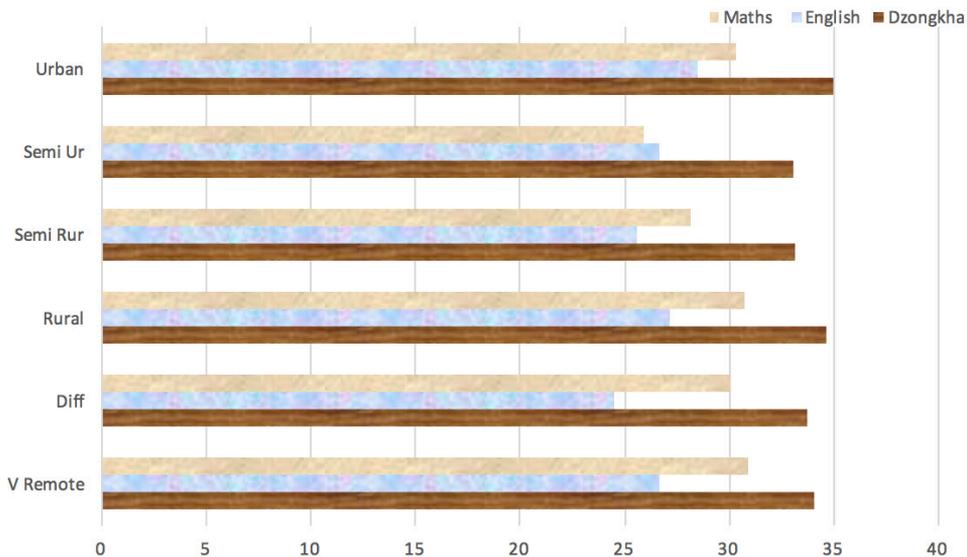

Figure 1.12: Performance by location across the subjects

### 2.3.5 Gender

When compared to the male students, female students across the country performed slightly better in all the three subjects (35.57 in Dzongkha, 27.80 in English and 29.83 in Mathematics).

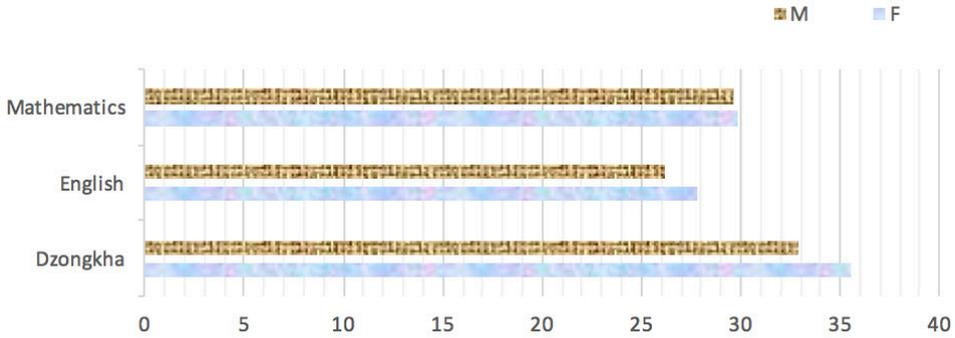

Figure 1.13: Performance by gender across the subject

### 2.3.6 Dzongkhag

1. Students of Lhuntse outperformed students in other Dzongkhags in Dzongkha (39.58) and Mathematics (35.7), while students in Trashiyangtse Dzongkhag performed better in English with a mean score of 33.02.
2. Students of Gelephu Thromde scored minimum in both Dzongkha (27.30) and Mathematics (23.88).
3. Students of Samdrup Jongkhar Thromde scored the minimum mean score of 18.09 in English.

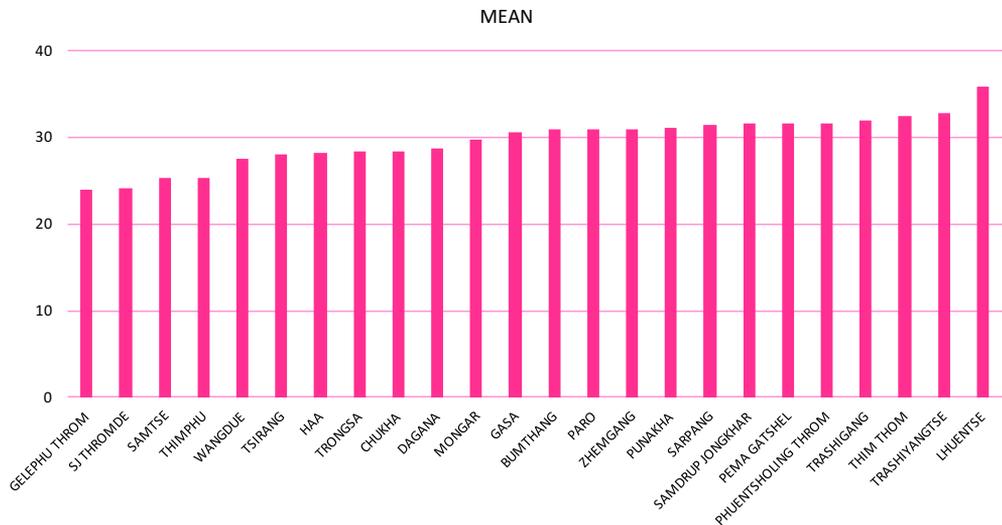

Figure 1.14: Performance in Dzongkha across the Dzongkhags/Thromdes (National Mean =34.23)

Figure 1.15: Performance in English across the Dzongkhags/Thromdes (National Mean = 27.01)

Figure 1.16: Performance in Maths across the Dzongkhags /Thromdes (National Mean = 29.75)

## 2.4 Class III Student Performance - Item Analysis

### 2.4.1 Dzongkha

A total of 2,320 Class III answer scripts were collected as samples from the schools across the country for data analysis. There were 1186 male students and 1134 female students and the overall mean score was 34.51 with a maximum score of 50 and minimum 1 out of 50 marks.

#### 2.4.1.1 Overall performance in three strands

There were three strands identified in Dzongkha: Reading, Writing and Language. The findings showed the performance in Reading was highest with a mean score of 15.32, followed by Language with a mean score of 10.38. Writing strand was the minimum with a mean score of 8.68.

#### 2.4.1.2 Item type

The paper consisted of three types of items: MCQ, SRQ and ERQ. From these three types, student performance was best in SRQ with mean score of 25.38 followed by 7.26 in MCQ. Student performance in ERQ was the worst with a mean score of 1.87.

#### 2.4.1.3 Cognitive level

Of the six cognitive levels, students performed better in Applying with a mean score of 13.68 and 5.33 standard deviation. The poor performance was in the Creating with 1.71 and 0.46 standard deviation.

#### 2.4.1.4 Reliability analysis

From the Extended Response Questions, item no ERQ\_Q3F\_I (2) had the highest mean score of 1.02 with 0.77 standard deviation. The difficulty index of this item indicates it to be a moderate item and it has a good reliability. Overall, it was a very good item with high discrimination between the high and low performers.

From the Short Response Question, SRQ\_Q1D\_I (5) had the highest mean score of 3.94 with 1.17 standard deviation. The difficulty index of this item indicates it to be an easy item and it has a good reliability. Overall, it was a very good item with high discrimination between the high and low performers.

From the Multiple Choice Question, MCQ\_Q1A\_I (1) had the highest mean score of .88 with .32 standard deviation. The difficulty index of this item indicates it to be very easy item and it has a good reliability. Overall, it was a very good item with high discrimination between the high and low performers.

### 2.4.2 English

A total of 2305 Class III answer scripts were collected as samples from the schools across the country for data analysis. There were 1161 female students and 1144 male students and the overall mean score was 27.41 with a maximum score of 49 and minimum of 1.5 out of 50 marks.

### 2.4.2.1 Overall performance in three strands

There are three strands identified in English: Reading, Writing and Language. The finding showed that the Class III students have performed well in Reading strand with mean score of 17.99. Further, the performance in Writing was the minimum with mean score of 2.73 but it had the maximum standard deviation showing more variation. The performance in Grammar was average with mean score of 6.70.

### 2.4.2.2 Item type

The paper consisted of three types of items: MCQ, SRQ and ERQ. From these three types, student performance was best in SRQ with mean score of 15.25 and 6.05 standard deviation. Student performance in ERQ was the worst with a mean score of 5.64 and 3.45 standard deviation.

### 2.4.2.3 Cognitive level

Of the six cognitive levels, students performed better in Remembering with a mean score 8.83 and 3.66 standard deviation. The poor performance was in the Evaluating with 2.13 mean score.

### 2.4.2.4 Reliability analysis

From the extended response questions, item no ERQ\_A (5) had the highest mean score of 2.73 though the difficulty index indicates it to be a difficult item. However, the item reliability was good and the discrimination index was also very good which also indicated that the item does not discriminate between the high and low performers. Overall, it was a good item. Item no ERQ\_C\_Q2\_3 (3) had the least mean of 0.59. The difficulty index indicates that it was a difficult item. However, the reliability index showed it to be a good item with no discrimination between the high and low performers.

Item no SRQ\_D\_Q3 (5) had the highest mean of 3.64 amongst the short response questions while the difficulty index indicated it to be a moderate item with good reliability and very good discrimination index. Thus, it was a good item. Further, item no SRQ\_C\_Q2\_4 (3) had the lowest mean of 0.90 though the difficulty index showed it to be a moderate item. However, the reliability of the item was good without discrimination between high and low performers.

MCQ 2, item no B\_Q1\_3 and B\_Q1\_4 had the highest mean of 0.71 while item no B\_Q1\_1 had the lowest mean score of 0.54. High mean items had low variation. Further, most items were moderate as they fell in the range between 0.30 – 0.70 on the difficulty index. Similarly, most items showed good reliability with very good discrimination index.

MCQ 3, item no C\_Q1\_4 had the highest mean score of 0.80 while item C\_Q1\_1 had the minimum. Nevertheless, the difficulty index indicated most items of MCQ 3 to be moderate with good reliability and low discrimination between the high and low performers.

Majority of the students (34.5%) achieved Proficiency level 4 and about 40% of the students achieved Proficiency Level 5 and 6.

### 2.4.3 Mathematics

A total of 2291 Mathematics answer scripts were collected from all the Dzongkhags and Thromdes for item analysis. There were 1150 female students and 1140 male students with a maximum score of 50 and a minimum of 1 out of 50 marks.

#### 2.4.3.1 Overall performance in content strand

As per the sample student performance in each content strand; students have scored the highest mean (70.84 in Numbers with a standard deviation of 2.05 and the score in Data-Probability strand was the least with mean of 53.171. There was no significance difference across the gender in all the seven content strand.

#### 2.4.3.2 Item type

Amongst the three test items types, sample student outperformed in SRQ with a mean score of 70.05 and 2.14 standards deviation followed by MCQ with a mean score of 67.59 The minimum mean score was 53.24 in the ERQ. Students have performed better in SRQ, followed by MCQ and ERQ.

#### 2.4.3.3 Cognitive level

The test items were developed based on the six cognitive levels of Blooms. The mean for remembering level items was the highest with 71.13 and 1.14 standard deviation. The lowest mean of 47.50 was in evaluating level items with the standard deviation of 1.51.

The mean was higher for lower order thinking skills items and lower for higher order thinking skills items.

#### 2.4.3.4 Reliability analysis

As per the Cronbach's Alpha measure, the scale for the 27 items was 0.87 which indicated that the items was on the excellent scale of reliability for that sample cohort at Class III.

Difficulty index measures the difficulty level of the items. Higher the difficulty index, easier will be the items and vice versa. Of the total 27 questions administered, sample student found SRQ-Q4i, SRQ-Q4iii, SRQ-Q4iv very easy and other items fell under moderate category.

Out of 27 items administered, 26 items fell in the discrimination index range of 0.30 to 0.56 which categorizes these items as very good. This means that these items were able to distinguish/discriminate between the high achieving students and the low achieving students.

Only one item had the discrimination range between 0.20 - 0.29 which needed to be revised because they do not differentiate between high achieving candidates and the low achieving candidates.

# CHAPTER 3    **RECOMMENDATIONS, OBSERVATIONS, LIMITATIONS AND CONCLUSION**

## **3.4.1    Recommendations**

- » Schools under various Dzongkhags to collaborate and learn from high performing schools.
- » Relevant stakeholders to place different interventions to increase the learning competencies in achieving higher proficiency level.
- » Schools to bridge the gender learning gap through different strategies in teaching learning process.
- » Schools to incorporate higher order thinking skill items in the school based assessment.
- » Schools to emphasize more on Grammar and Writing strand in English and Dzongkha.
- » Teachers to provide students with adequate practice on Reading and Writing of unseen texts.
- » BCSEA and REC to review on the mode of assessment of Classes III and VI year-end assessment.
- » Schools to follow the instructions prescribed by the BCSEA throughout the process of test administration and evaluation of the answer scripts.

## **3.4.2    General Observations**

The following observations were made while analyzing the sample answer scripts sent from the schools:

- » Marks were not recorded on the cover page of the question booklet as instructed.
- » Some of the student answers were not evaluated, scores were not awarded and some scores were awarded more than the allocated scores.
- » Some of the student details were incomplete on the cover page of the question paper.

## **3.4.3    Limitations**

- » The analysis was solely based on the raw marks obtained in the year-end assessment and had no socio-economic background questionnaires to make inferences on the student performance.
- » The item analysis was carried out sample answer scripts collected from the schools that represent the entire population.
- » The analysis was purely based on the data provided by the schools (test

administration and evaluation were carried out by the respective schools).

#### **3.4.4 Conclusion**

This study was based on the raw data of Classes III and VI, 2016 year-end assessment. The study was mainly conducted to ascertain the overall performance of the schools and the students in each subject to make informed decisions on the assessment framework and the quality of the year-end assessment items. Further, to provide opportunity to schools in order to strategize methodologies in improving the student learning outcomes and to enable the MoE and REC to amend policies and the current assessment framework.

The findings showed that the overall performance of students studying in both the levels across the subjects was average, however, the performance in Dzongkha in both the levels was comparatively better. It also indicated the existence of performance gap in gender, school level, school type and Dzongkhag.

The item analysis revealed the need to emphasize more on Grammar and Writing strand in English and Dzongkha. Teachers are required to provide students with adequate practice on Reading and Writing of unseen texts.

The study proposed some recommendations pertaining to the need of the schools to collaborate and learn from high performing schools, the relevant stakeholders to intervene in improving the learning competencies and assessment system and the MoE to prioritize resource allocation as per the number of students in the schools.

Henceforth, BCSEA could make an annual comparative study on the performance of the students across the country. There is a future scope for the BCSEA and REC to review the mode of assessment and framework which would provide an opportunity to make a comparative analysis of the traditional items with the competency based items. In future, BCSEA should come up with appropriate strategies in collecting and analyzing assessment data.
